

■ Classification of Animals

Class: V | Subject: Science | Topic: Animals and Their Classification

1. Introduction to Animals

- Animals are **living organisms** that can move, eat, breathe, and reproduce.
- There are **millions of animal species** found on land, in water, and in the air.
- Scientists classify (group) animals based on their **body features** to study them easily.
- One of the most important features used for classification is the presence or absence of a **backbone (vertebral column)**.

■ **Key Fact:** The animal kingdom is divided into two major groups — **Vertebrates** (animals with a backbone) and **Invertebrates** (animals without a backbone).

2. Classification Based on Vertebral Column

Classification of Animals Based on Vertebral Column

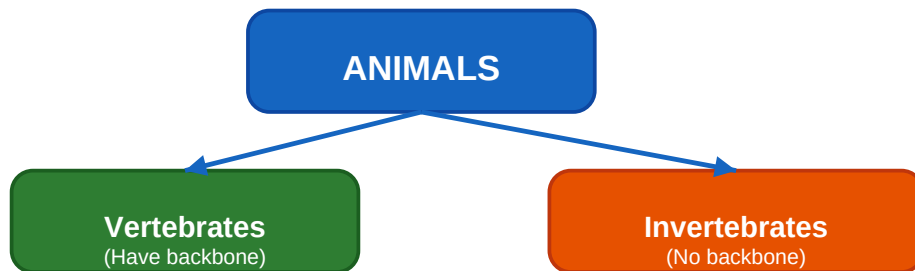

Figure 1: Classification of the Animal Kingdom into Vertebrates and Invertebrates

■ **Today's Focus:** In this class, we will learn about **VERTEBRATES** only.

4. Classification of Vertebrates

Vertebrates are divided into two groups based on their **body temperature**:

■ WARM-BLOODED

Body temperature remains **constant** regardless of the environment.

Mammals & Birds

❄️ COLD-BLOODED

Body temperature **changes** with the surrounding environment.

Fish, Reptiles & Amphibians

Blood Type	Group	Animal Class	Examples	Key Feature
------------	-------	--------------	----------	-------------

 Warm-Blooded	Warm-Blooded	 Mammals	Dog, Cat, Elephant, Human, Whale, Bat	Give birth to young ones; have hair/fur; feed milk
		 Birds	Eagle, Parrot, Penguin, Ostrich, Sparrow	Have feathers & wings; lay eggs; warm-blooded
 Cold-Blooded	Cold-Blooded	 Fish	Rohu, Salmon, Shark, Goldfish, Tuna	Live in water; breathe through gills; have scales
	Cold-Blooded	 Reptiles	Snake, Lizard, Crocodile, Turtle, Gecko	Dry scaly skin; crawl; lay eggs on land
	Cold-Blooded	 Amphibians	Frog, Toad, Salamander, Newt, Caecilian	Live on land AND water; moist skin; lay eggs in water

■ Summary

- Animals are classified based on the **vertebral column**.
- **Vertebrates** have a backbone; **Invertebrates** do not.
- Vertebrates are either **Warm-blooded** (Mammals, Birds) or **Cold-blooded** (Fish, Reptiles, Amphibians).
- The backbone protects the **spinal cord** and consists of 33 vertebrae.
